

THC® The Growing Benchmark

Australia's highest quality made and owned nutritional products and growing media available thanks to our teams continues research, development and testing. That's why THC nutrients are The Growing Benchmark and a choice for top performance.

THC[®] brand started with a passion for horticulture in the eighties and later in mid nineties progressed to growers choice by many, including professionals, hobbyist, commercial growers including Department of Agriculture.

Family founders with years of experience together with Dutch and local Bio Chemist Co. developed a second to none plant nutritional formulas that are of highest quality, using only the purest minerals and organic compounds.

THC[®] additives have been carefully formulated to enhance the already superior formulation of our base mixes and to deliver an advantage to the grower.

THC[®] unique base nutrients and additives are of extreme concentration that makes them very cost effective, in most cases double, up to 5 times the concentration your regular nutrient brand! (Always refer to simple and easy to follow uncomplicated dosing schedule for relevant growing media, plant type, liquid column and monitor water quality with relevant pH.)

THC® liquids undergo quality control analysis and assurance with laboratory and field testing. Each batch being tested independently and supplied with its own unique certification number for quality control and consistency.

THC® nutrients are made in Australia under licence by Dutch Horticultural Company and available in 1, 5 and 20 Litres.

Do Your Plants a Favour and Grow them in.....Australia's THC® The Growing Benchmark.

Best.

THC[®] RHP growing media is 100% natural sustainable substrate that is Certified Organic for horticulture. Processed and manufactured under strict Dutch RHP Quality Standards to ensure the highest quality.

Carefully sieved, aged, double washed and buffered with Ca and Mg to guarantee a safe growing medium with superior properties for rapid performance.

The substrate has a stable structure throughout the crop life thanks to its slow degradation.

The growing medium won't deteriorate or shrink during the growing period.

Has optimum Air to Water ratio with high Air percentage and excellent drainage for rapid root development. Always ensures great and even distribution of moisture for superior performance.

Contains Trichoderma, a beneficial bacteria that aids in protection against root diseasesis.

Has very low EC and stable pH.

THC[®] growing substrates are independently and randomly tested for quality assurance and consistency so they meet the regulatory requirements for RHP certification.

THC® Professional Plus buffered growing substrate is the preferred choice for professionals and hobbyist for its first class certified quality, rapid growth and root development

THC® growing medium is the "GROWING BENCHMARK".

THC® BUFFERED COCO PRO+

Optimised for vigorous plant performance. Enriched with Ca + Mg and Trichoderma. High porosity, excellent drainage. Supports healthy root system and foliage.

Ideal for professional horticultural use, hobbyist, vegetables, fruit bearing and flowering plants or as a soil improver.

FACTS and BENEFITS

- 100% natural sustainable substrate.
- Certified Organic for Horticulture.
- Processed and Manufactured under strict Dutch RHP Quality Standards.
- Carefully sieved, aged, washed and buffered with Ca and Mg to guarantee A safe growing medium with superior properties for rapid performance.
- Stable structure of substrate throughout the crop life thanks to its slow degradation.
- Growing medium won't deteriorate or shrink during the growing period
- Optimum Air / Water ratio.
- High Air percentage and excellent drainage for rapid root development.
- Ensures great and even distribution of moisture for superior performance.
- Contains Trichoderma, a beneficial bacteria that aids in protection against root diseases.
- Very low EC and stable pH.
- THC BUFFERED COCO PRO+ contains TRUE 50 Litres in volume = 10% extra over competitors!

COCO SUBSTRATE

THC BUFFERED COCO PRO+ is a 100% natural growing medium that has an exceptional capacity for absorbing and distributing water.

THC COCO has virtually no degradation making it more stable than any other organic substrate.

THC COCO retains its good drainage thanks to its dust, husk and fibre ratio for a very long time. It's high air percentage allows for very rapid root development.

THC COCO is buffered organic growing medium that is free from harmful pests,

or soil diseases, has optimum air-water system, contains Trichoderma that allows for rapid development of the plant and start of cultivation.

THC COCO optimum properties give great cultivating advantage to the grower and plants.

THC COCO is suitable for growing vegetables, fruit bearing and flowering and other favourite plants. Furthermore THC COCO can also be used to soil improver.

BUFFERED COCO

To produce the "Growing Benchmark" RHP Certified natural organic substrate,

process begins in India with selection of finest coconuts to produce coco coir and coco peat.

Once husks have been received they are separated, sieved, aged and washed to free salts soluble in water. However the cells of even the best coconut husks still contain elements such as potassium, sodium and Chloride bound inside to the coconuts complex.

Those salts inhibit the growth of plants as they are released when they come in contact with fertiliser. If left untreated (unbuffered) nutrients would become inaccessible for plants, resulting in Ca and Mg deficiencies, furthermore the high salt concentration would cause roots to burn.

That's why THC COCO is buffered, pretreated with Calcium Nitrate and Magnesium Sulphate

to remove the salts from the coco cells to avoid the nutrients lockout.

This process results in a quaranteed safe growing medium, optimised for rapid growth and root development.

THC COCO bears the quality mark of the Dutch Inspection Organisation RHP,

This ensures that this product meets the most stringent quality requirements.

THC the Growing Benchmark.

STORAGE

Store in a cool dry place above 4C.

Loosen THC COCO before filling pots. Airily fill pots, than add water with PH 6.0 until some drainage occurs.

WATERING

For best results use THC COCO A+B or other certified coco specific base nutrients.

MANUAL: Give water daily with half strength specific fertiliser

Or alternate between full strength fertiliser and water only.

AUTOMATIC: 2-4 times a day with coco specific fertiliser, achieving 30% run off.

THC® COCO A+B

Specific Advance Plant Food for use in Coconut Substrate

THC® coco A+B has been scientifically formulated to give growers maximum possible yields when growing in coco substrate, using only carefully balanced and integrated blend of the finest main and trace elements.

The advanced combination of both grow and bloom nutrients into just one A&B mix makes it easy to use and deliver high professional performance with bigger, faster superior results.

THC COCO A&B is enriched with high levels of Calcium, Magnesium and Boron. Calcium is the trucker of all minerals and it governs cell strength and division. Magnesium is the life blood of chlorophyll and is the phosphate synergist. Boron is critical for reproduction, drives Calcium, allows glucose flow to the roots, increases fruit set and reduces fruit drop.

THC COCO A&B is a professional complete plant food rich in premium elements that enables the plant to absorb the nutrients quickly and effectively and enhances growth, size taste colour and flavour.

For ultimate performance use THC COCO A&B in run to waste system using THC RHP certified substrate.

THC® GROW

Complete Advanced Nutrients for Rapid Growth

THC® GROW A+B Australia's leading advanced high performance two part horticultural liquid nutrients specifically development for professional plant cultivation in hydroponics, cocoponics, soil or substrate using recirculating or run to waste method. Only carefully balanced and integrated blend of the finest main and trace elements are being used in the THC GROW A&B to achieve lush and fast growth, healthy plants, large green vigorous shoots, highest quality for everyone, professional and novice.

THC GROW A&B is an extremely concentrated cutting edge two part nutritional formula for rapid growth and root development. THC GROW A&B contains pure organic Fulvic acid a natural powerful electrolyte that will increase nutrient uptake and enhance plant health and performance.

BENEFITS:

A powerful organic electrolyte, increases nutrients uptake, energises cells unique capacity to dissolve minerals and trace elements, chelates trace minerals, enhance cell division, delays the aging process, releases tied up minerals, improve photosynthesis, detoxifies medium pollutants, stimulates beneficial bacteria, enhances germination and root strike improves moisture storage, builds brix levels, lessons wilting.

THC® BLOOM

Complete Advanced Nutrients for Rapid Flowering

and enhance plants health and performance.

BENEFITS:

THC

THC® BLOOM A+B is Australia's leading advanced high performance two part horticultural liquid nutrients specifically developed for professional plant cultivation in hydroponics, cocoponics, soil or substrate using recirculating or run or waste method. Only carefully balanced and integrated blend of the finest main and trace elements are being used in THC BLOOM A&B to achieve amazing yields, fruiting, flowering, budding, improved aroma, healthy and vital plants, of highest quality for everyone, professionals and novice.

THC BLOOM A+B is an extremely concentrated cutting edge two part plant nutritional formula for rapid bloom development.

THC BLOOM A+B contains pure organic Fulvic acid a natural powerful electrolyte that will increase nutrients uptake

A powerful organic electrolyte, increases nutrient uptake, energises cells unique capacity to dissolve minerals and trace elements, chelates trace minerals, enhances cell division, delays the aging process, releases tied up minerals, improves photosynthesis, detoxifies medium pollutants, stimulates beneficial bacteria, enhances germination and root strike, improves moisture storage, builds brix levels and reduces wilting.

RHIZO SHIELD

Disease Control and Prevention Natural Microbial Inoculant

THC® RHIZO SHIELD is a natural form of microbial derived in part from naturally occurring plant extracts.

RHIZO SHIELD is environmentally friendly, non toxic and safe to use.

RHIZO SHIELD allows the plant to withstand attacks from biological containments like bacteria, fungi, algae and viruses.

RHIZO SHIELD will control and prevent various diseases, and sterilise plant roots.
RHIZO SHIELD condition the root zone, and builds healthier more powerful plants.
Please note that RHIZO SHIELD does not promote beneficial bacteria growth.
RHIZO SHIELD can also be also used undiluted as a spray to eradicate fungal outbreaks as well as other bacteria and virus and sterilizing equipment between crops.

BENEFITS:

Diseases preventative and treatment / maintains plant health and vitality / plant root zone conditioner /sterilizing agent /induces resistance to several common crop diseases like powdery mildew, leaf spot and root rot /cleans and rejuvenates plants and roots / provides resistance and cure against pathogens/ for use in soil or hydroponics / micro cleanser/ improves overall health of plants /no harmful chemicals.

DIRECTIONS:

PREVENTION: use 1ml per litre of nutrients solution throughout grow and flower phase.

CONTROL: use 2-4 ml per litre of nutrients solutions for 7 to 14 days. Repeat if necessary.

RHIZO SHEILD may initially foam up. This will dissipate over time. It has no adverse effect on plants.

SILICA

Stronger Vigorous Plant Builder

THC[®] **SILICA** is totally soluble form of liquid certified organic Potassium Silicate.

SILICA is an important element that has many benefits, including strengthening cell walls.

SILICA builds stronger and more vigorous plant stems.

SILICA reduces the negative effect of excess aluminium, sodium and manganese.

SILICA will increase Chlorophyll production.

SILICA improves plant growth, lifting yield and quality.

SILICA produces an armour like resilient layer in the outer cell wall, resulting in less fungal colonisation sites, decreased plant palatability and reduced lodging.

THC SILICA is made in Australia from natural certified organic elements.

BENEFITS:

Silica improves photosynthesis /builds stronger stems/
raises brix levels/ produce armour like resilient layer /
improves plant growth/ strengths plant cells walls /
improves quality / lifts yield /reduces lodging /
decreases plant palatability /
reduces fungal colonisation sites/
increases chlorophyll production.

B-52

Advanced Vitamin B+ Plant Tonic

THC® B-52 plant tonic with its unique blend of elements accelerates plant respiration, increases plant growth rates, stamina, energy and maximises flower production.

B-52 plant tonic contains balanced blend of B+ vitamins that have direct beneficial effect on plants such as creation and use of carbohydrates to boost energy levels.

B-52 plant tonic supercharges your regular nutrients solution to give you maximum performance.

B-52 plant tonic is the ultimate building block for strength, health and potency.

B-52 unique blend of elements influence the root zone environment to improve development.

B-52 is ideal for propagating and transplanting plants.

B-52 is proven to improve plants that are unhealthy or poorly developed. BENEFITS:

Stress reviver tonic / increased resistance to heat, cold and stress / builds stronger roots for more nutrients uptake /protective effect and increases resistance against diseases / better survival rate for cutting and seedling / boosts plants strength and immunity /maintains healthy metabolism /increases cell replication and stimulates roots /creates an improved absorption of nutrients/ boosts floral production & harvest / increases enzymatic activity.

ROID

Dynamic Mineral Flowering Enhancer

THC® ROID is extremely effective performance flowering enhancer that stimulates size, quality, weight, potency and provides for more numerous fruits and blooms, tighter harvest with enhanced sweetness taste and flavour.

ROID contains carefully balanced pure pharmaceutical grade P2O2 and K2O. Potassium and Phosphorus are the main elements for the metabolism of the plant and have direct influence on the flowering process.

ROID is extremely powerful concentrate that mixes instantly and can therefore be immediately absorbed by the plant for superior flowering results.

THC ROID is the strongest PK made with ultra-pure materials.

BENEFITS:

Increases weight /stimulates extreme size /higher yield / provides better quality/ accelerates the flowering response / provides heavier fruits and bloom / tighter harvest / ROID is instantly absorbed and distributed by the plant for rapid and effective results!

Final Bloom Booster Stimulator Agent

THC® EKSIT is a final stage flowering booster agent that generates extra yield of up to 30%.

EKSIT triggers an extra bloom swell at the end of natural flowering cycle, resulting in heavier and larger fruit and stimulating oil and terpene production.

EKSIT will unleash the full flowering potential of your favourite plant with results second to none that will amaze you.

EKSIT contains a special formula that gets applied to plants at later stage of flowering cycle, prior to harvest for improved ripening, heavier yield and increased potency.

EKSIT is derived from natural minerals and made with organic ingredients to deliver a superior produce to the grower. **BENEFITS:**

EKIST optimises harvest weight / triggers extra swell/improves taste and flavour / maximises resin and terpene production / increases yield amount / deliver full flower potential /organic **EKSIT** is <u>PGR Free</u> and is instantly absorbed and distributed by the plant for rapid and effective results!

RESKUE

First Aid for Plants

RESKUE is designed to give your plants new life by treating cause of Chlorosis, nutrient deficiencies and stress related illnesses.

RESKUE is specifically designed to tackle nutrients deficiencies that lead to Yellow Plant Syndrome.

RESKUE has been development for use with any and all hydroponic media.

RESKUE mixes easily and quickly into your nutrients solution.

RESKUE treats Chlorosis (yellow plant syndrome) that is caused due to lack of Chlorophyll.

RESKUE will revive your plants from heat and other stress, wilting, drooping, yellowing, starvation, root damage and nutrient deficiencies.

THC Plant RESKUE formula rushes chelated iron calcium zinc. nitrogen and other crucial Nutrient elements into plants cells to maximise healing power for fast recovery.

DIRECTIONS:

May be used as a Foliar, an Additive in Soil or Hydroponic Solutions. (Do Not Foliar under direct sun or HID Lights) **HYDROPONICS:**

To correct moderate deficiencies add 3 ml per 1 Litre, for severe deficiencies add 5 ml per 1 Litre of nutrient solution for 7 to 14 days. Repeat if necessary.

REGULAR FEEDING:

To increase concentration of essential elements in your solution, use 1 ml per 1 Litre of nutrients solution.

FOLIAR:

Use 2 ml pre 1 Litre of water and use good application practices. Repeat after 1 week if necessary.
